Ex.no:11 Deploying a Zoho Creator Application from Development to Production Environment

Aim:

To deploy a Zoho Creator application from the development environment to the production environment and make it available for real-time use.

Procedure:

1. Log in to the Zoho Creator account.
2. Open the application created in the development environment.
3. Test all forms, reports, workflows, and Deluge scripts.
4. Check for errors and correct them.
5. Open the application settings and select the Application Deployment / Environments option, if available.
6. Create or select the production environment.
7. Publish or deploy the tested application to the production environment using the available deployment options.
8. Verify that all forms, reports, workflows, and permissions work correctly in production.
9. Test the application by entering sample data.

Result:

The Zoho Creator application was successfully deployed from the development environment to the production environment and verified for proper functioning
