

Study of low code development vs traditional application development approaches

Aim:

To study of low code development vs traditional application development approaches.

FEATURE OF TRADITIONAL DEVELOPMENT VS LOW CODE DEVELOPMENT

Traditional Development	Low Code Development
* It requires manual coding * Takes more time to develop * Requires strong programming skills * More flexible for complex application * High development and maintenance cost * Debugging and testing are done manually	* It uses drag and drop with minimal coding. * Faster development process. * Can be used by both developers and non-developers * Best for simple to medium-complexity application. * Lower development and maintenance cost * Many testing and deployment features are

TRADITIONAL APPLICATION DEVELOPMENT: ADVANTAGE:

- * Highly customizable and flexible
- * Full control over the source code.

DISADVANTAGE:

- * Time-consuming to develop
- * Requires skilled programmers

LOW CODE DEVELOPMENT:

ADVANTAGE:

- * Faster application Development
- * Lower development cost and quick deployment.

DISADVANTAGE:

- * Limited customization
- * Performance may be lower than fully custom-built application.

RESULT:

Thus, the low code Development and traditional application Development approaches was studied
